

BACKLOG.md — Everything Still Left To Do

Phase 1: Prototype Polish (Claude Chat)

Core Mechanics — DONE

- Geodesic sphere with hex + pentagon tiles
- Two-image system with file upload + embedded defaults
- Derangement scrambling
- Pick-up/place with orange tile tint highlight
- Corner preview thumbnail (render-to-texture, flipped for outside view)
- Simple scramble swap on correct placement
- Last tile auto-complete
- Pole tiles (IN/OUT, excluded from gameplay)
- Inside/Outside view toggle (auto-switching in mosaic mode)
- Two-level hints (area → exact)
- Easy/Hard toggle
- Score, timer, progress bar, move counter
- Start/completion screens with mode selection
- Tile count slider (10–640)
- Grid edge toggle (off by default)
- Basic Web Audio sounds
- Pinch to zoom

Mosaic Mode — DONE

- Triangle mosaic texture generator (from good-day image)
- Detail slider (2–200, default 98)

- Inside view: mosaic tiles at correct positions
- Outside view: photo tiles at scrambled positions
- Amber pulse on tile selection (900ms delay before switch)
- Green pulse on correct match (outside then inside)
- Camera centers on placed tile after switch back
- Horizontal swipe direction reverses between views
- Momentum killed on view switch
- TRANSITIONING phase blocks input during animations
- Preview thumbnail flipped for outside perspective
- Mode selection on start screen (Mosaic / Image)

Still To Do — Prototype

- **Smooth view transition** — animated switch between inside/outside (currently instant)
- **Tile pickup animation** — subtle lift/glow effect
- **Correct placement animation** — satisfying snap, particle burst
- **Wrong placement feedback** — gentle shake
- **Better sound effects** — richer synthesized sounds, view-switch audio cue
- **Ambient soundtrack** — shifts tone as tiles are placed
- **Dim matched tiles on outside** — visual indicator of already-resolved tiles
- **Star rating** — 1-3 stars per puzzle based on score thresholds
- **Developer control panel** — grid size, hint timers, score multipliers, mosaic density
- **IN/OUT pole button functionality** — skip/next level
- **Test with variety of images** — validate mosaic mode with different scene types

Phase 2: Production Build (Claude Code)

App Infrastructure

- Capacitor wrapper for iOS/Android

- TypeScript migration
- Vite build system
- Persistent local storage (scores, streaks, settings)
- Offline support / asset caching

Content Pipeline

- Automated scene image sourcing (Skybox AI, stock, or AI-generated)
- Scene QC workflow (minimal — mosaic mode only needs one good image)
- Asset compression (4096x2048, ASTC/BC7)
- Scene packaging and delivery system

Daily Game System

- One new scene per day
- Weekly country/location themes
- Streak tracking (consecutive days played)
- Weekly bonus scene unlock (complete all 7 days)

Monetisation

- Free: one game per day
- Weekly unlock fee
- Monthly subscription: bonus levels, exclusive scenes
- In-app purchases
- Consider: rewarded video ads for hints

Social & Sharing

- Share card generation (screenshot of completed scene + score)
- Social media integration
- Leaderboards (optional)

App Store

- Screenshots and preview video
 - Description and metadata
 - Privacy policy, age rating
 - Performance testing on budget Android
-

Phase 3: Post-Launch

- Interplanetary/fantasy scenes (subscriber exclusive)
 - Historical/themed weeks
 - Achievements system
 - Accessibility options
 - User acquisition campaigns
 - GLB 3D model exploration (Skybox provides these — walkable completion reward?)
-

Decisions Still Needed

- Final game name
- Tone/vibe and narrative ("glitching simulation" direction emerging)
- Pentagon special role
- Monetisation pricing
- Audio investment level
- Landscape orientation support
- IN/OUT button functionality
- Outside mode as gameplay feature or just completion reward?
- Whether to keep Image Mode in shipped product or mosaic-only
