

RESTART.md — Where We Left Off

Last Session: April 12, 2026

What was accomplished

1. Added **Mosaic Mode** — generates “bad day” from the good day image using solid-colour triangles
2. Replaced original hex-based mosaic with clean equilateral triangles (hex tessellation was messy)
3. Added mode selection on start screen: Mosaic (abstract triangles) vs Image (two panoramas)
4. Added Detail slider (2–200) for triangle density, default 98
5. Refactored gameplay for **inside/outside two-phase mechanic** in mosaic mode:
 - CHOOSING: inside view shows mosaic tiles in correct positions
 - Player picks a mosaic tile → amber pulse for 900ms → view flips to outside
 - SEARCHING: outside view shows scrambled photo tiles on a floating globe
 - Player finds matching photo tile → green pulse → view flips back to inside
 - REVEAL: camera centers on newly placed tile, green pulse confirms success
6. Reversed horizontal swipe controls for outside view (natural globe-spinning)
7. Flipped preview thumbnail horizontally to match outside perspective
8. Grid lines off by default
9. Outside camera distance tuned to 780 (was 1200)
10. Added TRANSITIONING phase to block input during view-switch animations
11. Momentum killed on every view switch to prevent wrong-direction drift
12. Image mode completely preserved — untouched original two-image behaviour

Current state of the prototype

- **Working well:** Full mosaic mode gameplay loop with inside/outside switching, preview, hints, scoring, sounds, amber/green pulse feedback, auto-complete last tile
- **Working:** Image mode (original two-panorama system, unchanged)
- **Not yet built:** Animations (tile lift/snap), ambient soundtrack, developer control panel, daily system
- **Creative direction emerging:** “Glitching simulation” narrative — mosaic = corrupted reality, player reassembles the real world

What to do next

1. **Playtest and tune** — find sweet spots for triangle density vs tile count combinations
2. **Visual polish** — tile pickup/placement animations, particle effects on correct placement
3. **Sound improvements** — view-switch audio cue, richer placement sounds, ambient soundtrack
4. **Consider:** dimming/marketing already-matched tiles on outside view
5. **Consider:** smooth animated transition between inside/outside (not instant switch)
6. **Prepare for Claude Code handoff** — production build

Key files

- `panorama-viewer.html` — Working prototype (~460KB with embedded images, ~960 lines)
- `M3_Ink_Drawing_equirectangularjpg_...jpg` — Bad day image (ink drawing hilltop village)
- `M3_Dutch_Masters_equirectangularjpg_...jpg` — Good day image (Dutch Masters hilltop village)
- `claude.md` — Project rules
- `memory.md` — Key decisions and facts
- `restart.md` — This file
- `backlog.md` — Full task list
